

## British made engines with UK service support

- Dual and tri systems available
- Unique control system
- Island mode as standard
- Cost effective & energy efficient
- Access to a national network of experienced service engineers

# Bespoke CHP engines, made to customer design

Upgrade your Combined Heat & Power engine to a bespoke solution, tailor-made to your unique requirements, and fitted by the experts at AMZCO.

Our bespoke CHP engines offer quality, innovation and significant cost-savings, all using British made engines manufactured by Perkins® - one of the world's leading providers of diesel and gas engines; predominantly based on 249, 499, 749 and 999 kW/h ranges, but alternative sizes can be made to order.

## Dual and tri-fuel capability

Biogas, natural gas and LPG systems available.

## 10 year guarantee

A decade of worry-free and trouble-free operation.

## Dependability and reliability

Clean, efficient gas fuelled engines for the power generation industry.

## Open operating system

Using Woodward control systems configured by in-house experts.

## National support network

Working with QEnerSys to provide access to a national network of support.

## Island mode as standard

Fitted with island mode for energy stability and security.

## Cost savings

Upgrading your CHP engine could save you up to 66% per kWh.
